

WEIGANG

Motivation Through Organisation

Planning

Practical Experience

Visualisation for *WEIGANG* – information, goals, sequences and results displayed in a simple and understandable way – has always been a centralized subject.

Through decades of experience in manufacturing and sales of organisational solutions a wide range of products and applications was established, which offers our customers and interested parties a large spectrum of individual solutions.

Our regional sales partners are available to assist you with their professional competence in these areas on-site.

- Visual Management
- KANBAN, CIP, TQM, TPM, etc.
- Planning
- Controlling
- Scheduling

WEIGANG...

Since 1945 *WEIGANG* produces conventional organisational means.

The production facilities comprise metal, wood, plastic and paper processing.

Our top priorities are high-quality products and satisfied customers.

We combine production know-how with the experience from various manufacturing sectors and thus offer a wide range of products which meet all of our customers expectations.

However, it is important that every single member of our staff has the same understanding of quality and reliability.

Therefore, we have been focusing on complying with the DIN ISO 9001 standard and were certified already in May 1997.

**Certified Production
in Germany**

Planning System PLANO

Channel planning board for use with cardboard strips and plastic signals for visualization of projects, personnel, capacities, orders, improvement suggestions, schedules and many more planning jobs

7

Planning System DYNA.....

Planning board with profile rails for coloured, writeable, snap-on bars. Ideal for scheduling of shift work, absentee overview or as matrix for employee qualification.

15

Planning System ORGA

The compact pegboard planning system for transparent planning, accurate to the day. Ideal for holiday/vacation planning, over a time period of 1 year and more.

21

Production Planning Board

The tool for planning, control and target-performance comparison. Planning slips show the current capacity utilisation and provide information in reference to the status of orders, deadline and capacity.

27

Card Planning Board

The versatile one: 2 board widths, 3 board heights and 4 different visible edges for 5 different document sizes with a capacity from 2 to 12.5 mm.

33

Docu Panel Size I and II, Stagger Display IV

Compact document overview and organisation on sturdy panels for different tasks.

41

Channel Planner V.....

Expandable panel system with self-clipping plastic channels for maximum use of machines, order and capacity planning.

44

Channel Planner V – KANBAN

The solution for KANBAN control! Transparent display of the KANBAN cards, the numerous variations and modular concept of the board system provide the necessary flexibility.

46

Cascading Display – one compartment, 1000 possibilities

Versatile, coloured metal compartments for different document sizes. Order overview, work distribution, organisation and filing system or KANBAN control using the colour code doctrine.

53

Wall Pockets

Sturdy, transparent pockets made of plastic for quick access

55

Workshop Scheduling Board

Planning and order allocation with job order pockets for workshops, body shops, metalwork shop, maintenance divisions, small businesses.

56

Solutions

Individual products pertaining to planning, pocket and visualisation systems made to our customers requirements. **WEIGANG**..... where ideas turn into products.

59

Why planning?

Planning boards help to display projects, tasks and work flows according to their sequence and also show the time and capacity requirement. This allows a fast recognition of availability, responsibility, utilization of availability, status of processing or imminent delays, and therefore immediate reaction.

Which type of planning?

The task is the deciding factor for the type of planning. We distinguish between line and column planning, which displays the result of a thorough breakdown of the task.

Questions for line planning:

1. Which planning cycle in hours, days, weeks or months is required?
2. What is the smallest time unit that shall be displayed?
3. How many rows are required to list the projects to be planned, employees, machines etc. one below the other?
4. Are there additional rows available for extensions and/or a legend?
5. Which display items or documents shall be used; for example paper size A4, A5, or EDP format, cardboard strips as well as plastic signals?

Fig.: Planning System PLANO

3 Row and column planning

Questions for column planning:

1. What should be identifiable in the header line?
2. Which display items or documents shall be used?
3. Depending on the display item or document to be used, which column width is required?
4. How many activities have to be listed one below the other?
5. What is the required holding capacity of each single line?

Fig.: Planning System DYNA

...any questions?

We are glad to assist you!

Fig.: Boards with a versatile time line/axis: »Sliding Planning«

»Sliding Planning«

The individual board panels of the sliding planning system can be aligned next to each other on suspension or wall rails. Planning panels can be rotated; the ones no longer needed or completed are taken out of the suspension rails on the left side and are reinserted on the right side as the last panel.

Thus all the ongoing events/operations are always current on the left side at the beginning of the planning. Title panels and T-cards are used to designate the individual rows.

The Systems 4

Fig.: Boards with a »fixed frame«

»Fixed Frame«

The fixed frame planning board system allows universal, simple and clear planning. The planning board consists of individual, modular expandable boards. The entire board is comprised by a frame.

Fig.: expansion possibilities

Fig.: Sliding Planning – combination of the planning systems PLANO and DYNA. Other combinations with planning system ORGA, basic boards, card planning boards, etc. are possible.

Every planning is an on-going process with time. Efficient planning instruments must adapt to this fact by providing an »endlessly« usable line. In order to meet this demand, **WEIGANG** has designed the »Sliding Planning« system.

For the sliding or so called continuous planning a variety of planning system types are available depending on requirements. All of them provide an optimum visualisation of the tasks, in order to reach at most transparency with the least amount of time and effort.

The entire system is composed of individual planning panels. The title and planning panels of different sizes allow individual planning as well as optimum usage of available wall space. The use of Free-Standing Frames is also an option.

The principle behind the Sliding Planning is that the completed, empty planning panels are removed and the entire remaining planning surface can be shifted to the left next to the title panel. The unused planning panels will be reinserted on the right side into the wall rail and are available for further planning. A wide planning range is constantly available through this approach.

It is easy to move the individual planning panels in and out of the wall rails. The planning elements are held together as a combined planning surface with magnets, and can be separated easily.

Easy-moving ball bearing rollers guarantee the entire board or individual planning elements to slide without getting jammed.

The wall rails are available in different lengths, to be used as basic rail and can be extended later with expansion rails to any length, depending on the requirement of the planning range. The included mounting kit ensures easy and fast wall mounting, expediting the use of the planning board.

5 The Principle

Being able to plan on »two levels« allows the optimum use of the available wall space, and the opportunity to move the title panel simplifies the line allocation.

Fig.: Wall Twin Rails with mounting kit

Professional Planning is the foundation for every business to be successful on the market. The instruments used – the planning system – must be flexible and adjustable. The possibility of identifying bottlenecks and a quick reaction must be simple and fast.

WEIGANG's planning board programme with a fixed frame is manageable and provides an overview of the essentials. Functionality and modern design are combined with a user friendly and individually designable planning system with the fixed frame planning system.

All boards have an elegant and sturdy frame. The modular concept enables an expansion of the board at any time. The connectors between the frame parts and connector strips of the planning boards provide maximum stability.

It only takes a few easy steps to mount the planning boards with a fixed frame on the wall. The included mounting kit and a few tools is all you need. The alignment pieces simplify the horizontal mounting.

The fixed frame system grows by demand. The fixed frame system enables reliable, simple and well arranged scheduling.

The Principle 6

The versatile fixed frame system

- Planning System PLANO – fixed frame universal board for cardboard strips with added signals
- Planning System DYNA – fixed frame profile board with write-on and moveable indicator bars
- Planning System ORGA – fixed frame pegboard for exact to the day scheduling for years
- Channel Planner V – fixed frame self-clipping rows for different document sizes with a 24 mm visible edge

Because of the **modular design** an adjustment of the planning board is easy when planning situations change. The Fixed Frame Boards suit any office based on their functionality and modern design.

Utensil trays made of plastic, which slide into the bottom frame of the planning board, keep pens, pencils and supplies at hand.

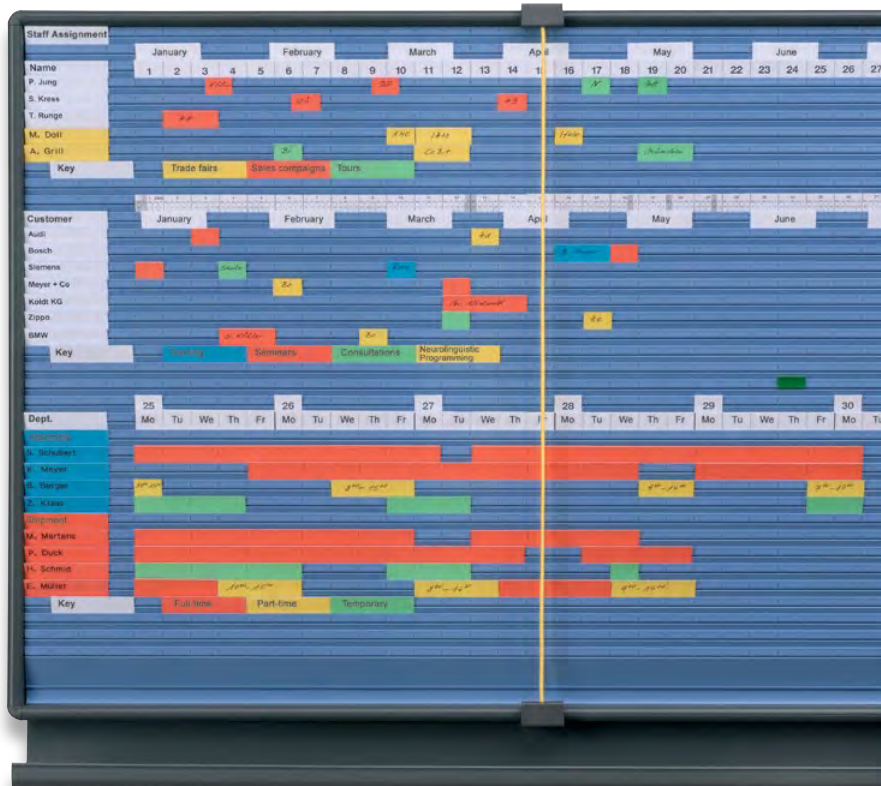

Project Planning

The foundation of an accurate and reliable project planning is always an explicit and clear arranged visualisation of the overall project with all its activities, whose duration is limited by start and finish dates.

This application sample shows the advantage of the planning system PLANO and the possibility to apply three different time scales at the same time.

7 Planning System PLANO

Personnel Planning

An explicit and clearly arranged visualisation shows who will be utilized or trained where and when, this means everyone sees where the colleagues can be found.

Where are personnel shortages, where are free spaces?

Capacity Planning – Sliding Planning

It is quite a challenge to accommodate the deadlines set by our customers and the ideal efficiency of the machines or assets.

The visualisation of the scheduled work order times help to make the right decision. The various activities are shown by the colours.

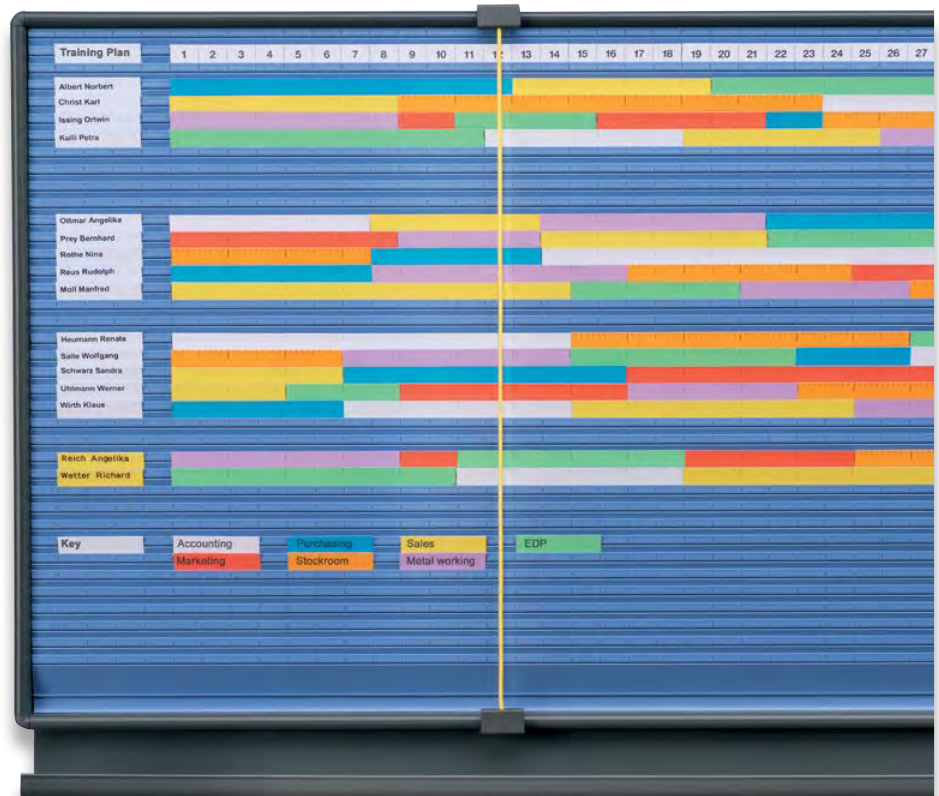

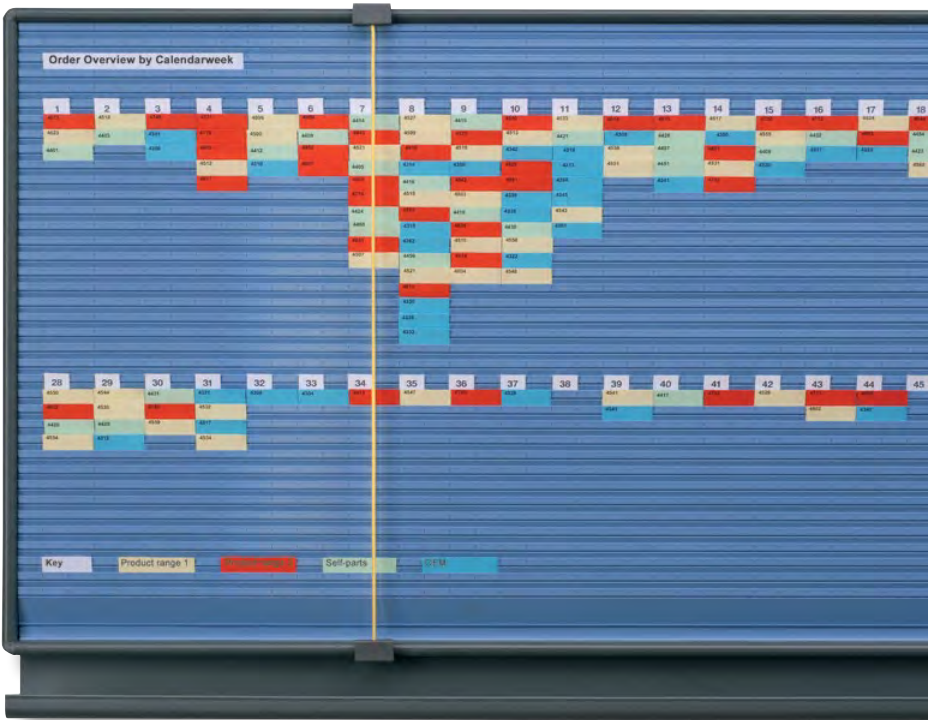

Planning System PLANO

Training Programme

The realistic and chronological structure of the training programme requires the overview of the training in the individual departments.

These should not be under or over staffed. The requirements can be well matched on the planning system PLANO and visualised with the coloured strips. Special dates, e.g. exams can be shown with additional plastic signals.

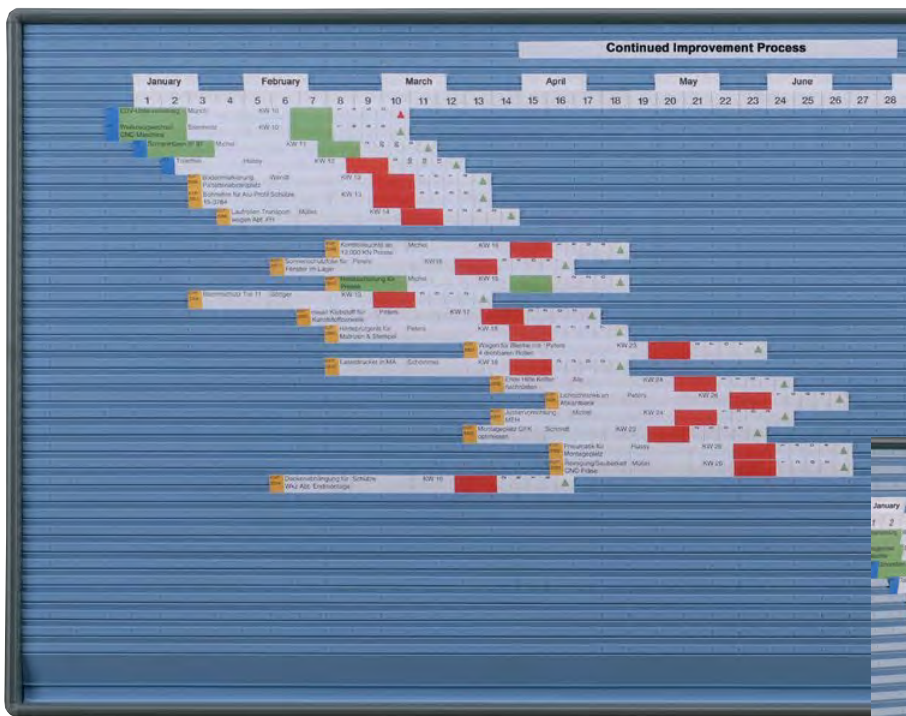

Order Overview

Immediately recognisable with one look, how many orders exist in which week from which customers or production areas. The coloured differentiation allows you to recognize the peaks in the separate areas immediately.

9 Planning System PLANO

CIP Boards

The development of a continuous improvement process from the employee suggestion system not only requires motivated staff, but also a structured and transparent process flow, clear responsibilities and properly functioning control. Using a scheduling board system, you can present the measures to be taken for improvement on a specially designed CIP-card in the board. All required information for the project is listed on this card.

Weekly Planner

The weekly planner allows everyone to see at one glance which task has to be handled. The weekly planner has self-clipping channel rows to insert different coloured cardboard strips.

The coloured cardboard strips show project phases, time periods or sequences. Additionally, it is possible to mark special dates with coloured signals, which function as a »visible alarm clock«.

Planning System PLANO

Planning 1 week for 30 employees or
 Planning 2 weeks for 15 employees
 W = 1260 mm, H = 480 mm,
 28 mm scaling, 5 days a week,
 8 hours a day, 1 hour = 28 mm,
 plus 3 hours for Saturday,
 36 channel rows
 Item No.: 88 45 71*

Planning 1 week for 45 employees or
 Planning 3 weeks for 15 employees
 W = 1260 mm, H = 720 mm,
 28 mm scaling, 5 days a week,
 8 hours a day, 1 hour = 28 mm,
 plus 3 hours for Saturday,
 56 channel rows
 Item No.: 88 45 73*

Scale Strips

white, Mon – Sat, 28 mm scaling
 L = 1204 mm, 1 PK = 2 pieces
 Item No.: 83 50 245

* VC Order reference: each time you order, please insert the one-character colour code* 0 (aluminium anodized) or 7 (umbra grey) into the article number.

TPM-Masterplan

On the left side you see the 8 pillars of TPM and the workstations which will be audited.

The 8 Pillars

.... of the reference model for operational excellence are signed and colored with blue Data Strips. The first pillar "CIP" is partitioned into TPM-Basics, learn to see loss, notice the loss, stop sign process and shopfloor management. Below pillar 2 "Autonomous maintenance" and pillar 3 "planned maintenance" the planned steps and the audits are placed.

The Planning System PLANO

is an all-purpose planning board adequate for every planning task. The overlapping channel rows are designed to insert cardboard strips. The self-clipping function of the individual rows prevents accidental movement of the cardboard strips. The universal capability of the planning system PLANO is displayed by the signals which can be placed on the channels. They stand out behind the data strips and enable an additional possibility of visualisation. Out of the 32 mm data strips 12 mm are visible, also an additional 2 mm of the signals are visible.

Height/Scaling	Item No.:	Item No.:	Item No.:
960 mm	①	②	③
20 mm	-	88 12 507	88 12 508

All shifts in view

Which employee in which shift is responsible for which task?

Where are absent times such as vacation or out of the office appointments?

The planning system DYNA shift planner helps to display these facts.

The brightly coloured indicator bars allow you to identify various information from a distance.

15 Planning System DYNA

Project Planning – Sliding Planning

The planning system DYNA uses write-on/dry-erase indicator bars which snap on. Because of the special profile the indicator bars snap on the rows and are although moveable.

Absence Overview

See at a glance, who is when and for how long out of the office, without changing the programme. It can be so easy.

The planning system DYNA uses coloured plastic signals, which securely snap on the row and are slideable.

The columns indicate the estimated time of return and allow a quick recognition of the staff in the office or at the exhibition stand.

Additional coloured signals can also show absences lasting several days.

Planning System DYNA

Employee Skills

Who is best qualified for which job/task?

Who needs further training?

These questions are easily answered with the qualification matrix. For the simple and effective description 4 colours are enough.

Our idea: A legend will give the board a »voice«.

The planning system DYNA

consists of profile rails, on which write-on plastic bars are clipped. This snap-on mechanism allows easy restructuring or rescheduling. A lot of information can be identified already from a distance because of the coloured signal bars. The Sliding Planning system can be extended endlessly on the side, »fixed frame« boards can also be extended downward.

Felt Tip Pens

water soluble, wallet of four,
in 4 assorted colours
(red, blue, green, black)

Item No.: 87 53 354

Cutter/Clippers

to cut signal bars to the desired length
Item No.: 87 58 100

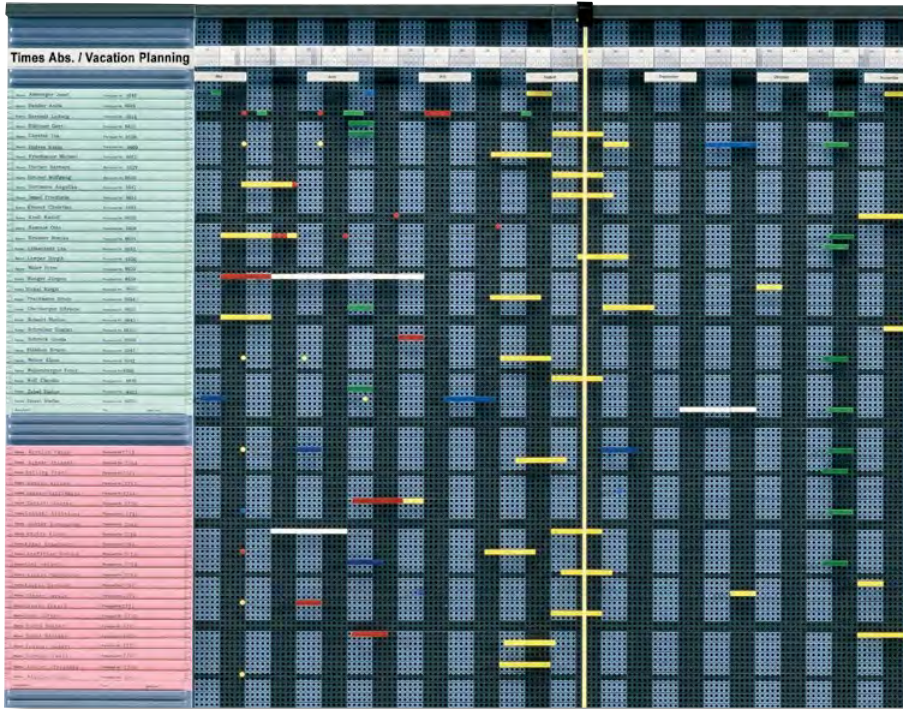

Fig.: Planning System ORGA – Sliding Planning – with T-card Title Panel

The title panel for T-cards provides an accurate line reference even at a large planning horizon, as it can be moved in front of the planning board on the second guide rail.

Times Absent and Vacation Planning

The planning system ORGA reveals where the employees are.

The compact pegboard is divided into a 5- or 7-day week by the pre-printed grid pattern.

The signals in different colours and shapes document the reason for the absence or special events.

The slidable dateline cursor shows the current date and divides the areas »what was« and »what will be«. Therefore the entire personnel situation can be transparently displayed, and provides a complete overview during large meetings.

21 Planning System ORGA

Fig.: Planning System ORGA – Fixed Frame

The picture shows a vacation and times absent planning over a one-year period. The names of the employees are listed on white 80 mm long index labels for identification.

The transparent cover provides a secure hold of the label on the track profile.

The exact daily sub-division on the planning board is achieved with the 4 mm per day divided calendar scale.

The different colours of the signals allow to recognise the reason for the absence, and the shape shows e.g. half days, whole days or longer times.

40 mm long track profiles are used to indicate the months.

Provident scheduling of employees prevents bottle necks and unnecessary hectic. The planning system ORGA shows who is out of the office, when and how long. The coloured signals show the reason of the absence, the length of the signals provide information on the duration of the absence.

Planning System ORGA

the pre-printed grid divides the compact pegboard into 5- or 7-day weeks. The signals are simply inserted in the double-row perforation and can easily be removed if the dates change. The moveable dateline cursor shows the current date.

The Planning System ORGA shows at a glance

- employees and the departments they are affiliated with
- scheduled vacation and vacation days already used
- business trips
- work on weekends and holidays
- absence due to illness
- possible bottle necks
- required support

Planning System ORGA 22

Annual Planner 7 days a week

for up to 50 employees
consisting of:

- 1 planning board with a usable surface of W = 1680 mm, H = 480 mm
- 1 utensil tray to hook into planning board frame
- 1 dateline cursor
- 2 signal storage cases
- 1 PK scale holders L=280 mm
- 2 PK calendar scales with 7 days/week

- 1 PK track profile 40 mm
- 1 SH each: labels in white, yellow, pink, blue and green
- 500 pcs square signals in 5 assorted colours
- 500 pcs rect. signals 8/20mm in 5 assorted colours

Item No.: 85 40 71*

Annual Planner 5 days a week

for up to 50 employees
consisting of:

- 1 planning board with a usable surface of W = 1260 mm, H = 480 mm
- 1 utensil tray to hook into the planning board frame
- 1 dateline cursor
- 2 signal storage cases with:
 - 1 PK scale holders L=280 mm
 - 2 PK calendar scales with 5 days/week
- 1 SH each: labels in white, yellow, pink, blue and green
- 500 pcs square signals in 5 assorted colours
- 500 pcs rect. signals 8/20 in 5 assorted colours

Item No.: 85 40 70*

Fig.: signal storage case with accessories

* VC Order reference: each time you order, please insert the one-character colour code* 0 (aluminium anodized) or 7 (umbra grey) into the article number.

The Planning System ORGA

is a planning board system with 4 mm hole graduation. Two lines of holes are horizontally combined to one row with incised lines. This system allows long-term and effective planning on minimum space. Calendar scales with a division of 5 or 7 days per week are available. The »Sliding Planning« has the advantage of »endless planning«. The planning panels are guided on rollers in the twin track wall rails and can be rearranged without any problems; allowing the most current time period to always be up front even during long-term planning.

Height/Scaling	Item No.:	Item No.:	Item No.:
960 mm			
5 Days	-	-	85 12 508
7 Days	-	85 12 517	85 12 518
Title Panel T-cards	85 22 526	-	-
480 mm			
5 Days	-	-	85 13 508
7 Days	-	85 13 517	85 13 518
Title Panel T-cards	85 23 526	-	-

Total Height = 1032 / 552 mm

W=150 mm W=140 mm W=280 mm

Title Panel for T-Cards ①

W = 150 mm, H = 960 mm or
H = 480 mm with slots. Number of usable rows if using T-cards in the height of:
148 mm = 103 rows or 41 rows
52 mm = 115 rows or 54 rows
Row spacing is 8 mm.

Planning/Title Panel ②

W = 140 mm (35 vertical rows of holes)
H = 960 mm with 120 rows or
H = 480 mm with 60 rows. Row spacing is 8 mm, one row consists of 2 horizontal lines of holes. Optionally vertical scaling with 28 mm spacing for a 7-day week is available. In combination with track profiles the planning panel can also be used as title panel.

Planning Panel ③

W = 280 mm, (70 vertical rows of holes)
H = 960 mm with 120 rows or
H = 480 mm with 60 rows.
Row spacing is 8 mm, one row consists of 2 horizontal lines of holes. Optionally vertical scaling with 20 mm spacing for a 5-day week or 29 mm spacing for a 7-day week is available.

Production Control with the WEIGANG Production Planning Board

Even the most accurate planning is useless, if the appropriate resources are not available to enforce it. Also it is to uncertain to distribute the responsibility to enforce the production schedule to various decentralized places, who are usually already overloaded with their own tasks. There you need a central place, at which the current tasks can be visually identified and reaction to interruption can be immediate.

27 WEIGANG Production Planning Board

For the optimum visualisation of the target and actual state, the documents on the right side of the Production Planning Board are marked with a colour bar, and depending on the status they are placed in the column »in progress« or »stop«. Based on the modular design more columns can be added later.

The colour bar in the application sample shown allows to identify the use of capacity of up to 30 work stations over a 3-week time period at one glance.

The columns »in progress« and »stop« show the current actual state. At a row spacing of 28 mm all the important data on the documents is visible, without removing the document.

The Free-Standing Frame allows the production planning board to be placed at any location.

WEIGANG Production Planning Board **28**

Important for a smooth production are good communication and clear responsibilities between the parties involved. Precisely one person is responsible for the planning board.

We are happy to provide you with the entire reference report. The contact address is on the back of the catalogue.

WEIGANG Production Planning Board

The individual board elements are slidable and can be removed from the suspension rail. Therefore it is guaranteed that the current time frame is always up front.

The empty (completed) planning panels are removed on the left and reinserted on the right of the suspension frame and thus allow continuous planning.

Design

The frame of the production planning board is made of metal and plastic profiles in grey white RAL 9002. The self-clipping rows hold documents with a vertical size of 74 mm (1), 82.5 mm (2), 102 mm (7) and 148 mm (6). At a row spacing of 28 mm the visible edge for documents is 24 mm, and at a row spacing of 19 mm the visible edge is 17 mm.

Scale Graduation

The control panel is delivered with scale strips in the rows. The scale strips are pre-printed, different on each side:
 Scaling 1 = 40 mm pitch lines each approx. 16 mm wide.
 Scaling 2 = 32 pitch lines each approx. 20 mm wide.
 Every fifth scale strip is blank and can be used to subdivide the rows.

29 WEIGANG Production Planning Board

Production Planning Board, Basic Board

consisting of:

- 1 Title Panel W = 250 mm
- 1 Planning Panel W = 660 mm (670 mm incl. end plates) with row scales and end plates, index labels in 5 assorted colours, 1 dateline cursor, 1 PK signal tabs, 4 neutral frame scales.

33 Card Planning Board

The Card Planning Board

provides an optimum of clarity and flexibility for planning sequences and order disposition:

- the coloured line on the document header indicates the duration of the job/task
- utilised and available capacity of work stations and employees are shown for one or more weeks
- due-process through active planning provides high customer satisfaction
- absent times are immediately recognized
- available capacity is identified at a glance
- transparent display and therefore avoiding idle time

Card Planning Board Weekly Planner

for document size A4 portrait,
visible edge 32 mm,
W = 1500 mm, H = 960 mm,
20 rows for scheduling of 16 employees
over a period of 1 week or scheduling of
8 employees over a period of 2 weeks
Item No.: 83 10 288

for document size A4 portrait
visible edge 32 mm,
W = 1500 mm, H = 1280 mm
30 rows for scheduling of 24 employees
over a period of 1 week or scheduling of
12 employees over a period of 2 weeks
Item No.: 83 10 289

Special Scale

according to sample
1 PK = 2 strips
Item No.: 83 50 204

Production cost

for special scale
Item No.: 83 50 202

The Card Planning Board

impresses through the multitude of document sizes, visible edges and different holding capacities.

With the self-adhesive scale strips or special made scale strips the card planning board is able to master any task, regardless whether it is a complex continuous planning task or just job order allocation.

The title panel and board panels are available for 5 different vertical document sizes with 4 different visible edges. The visible edge is also the deciding factor of the row capacity.

The number of rows for each vertical document size is a result of the chosen visible edge and board height.

W = 220 mm

Separators for Card Planning Boards

The separators are inserted into the slotted columns and glued.

They cannot be altered subsequently. The height of the separators corresponds to the height of the rows. The depth depends on the document size, capacity and visible edge. It is individually adjusted to these factors.

Height 1280 mm

Surcharge for the first separator
Item No.: 83 50 312

Surcharge for each additional separator
Item No.: 83 50 313

Height 960 mm

Surcharge for the first separator
Item No.: 83 50 314

Surcharge for each additional separator
Item No.: 83 50 315

Height 480 / 640 mm

erster Trennsteg
Item No.: 83 50 316

weitere Trennstege
Item No.: 83 50 317

Note:

The width of a separator amounts to 1,5 mm. This reduces the board width by the number of separators x 1,5 mm.

Separators

Stagger Display IV

Grey white RAL 9002 stagger plates are placed overlapping in the blue RAL 5002 frame. The frame and stagger plates are made of metal. The stagger plates can easily be adjusted and can be misaligned in 20 mm steps. Therefore visible edges from approx. 20 mm to 100 mm in any desired combination can be set up. The capacity of the stagger display IV is approx. 6 to 29 mm, depending on the pre-set visible edge and document size.

For document size **A4 portrait**

KANBAN Control

Company Linde AG in Aschaffenburg uses the channel planner V for KANBAN control. Here the KANBAN cards are inserted in flexible, self-clipping channels.

Since it comprises individual scheduling board elements, the entire KANBAN system can be extended both in height and width depending on the space available and on requirements.

KANBAN

ensures that only what is needed will be produced, and exactly when it is needed.

The **five steps** for KANBAN implementation are:

1. Analysis and process selection
2. Defining the KANBAN rules
3. Selecting the KANBAN type
4. Scheduling and dimensioning
5. Creating the cards and organisational tools.

The 8 most important **KANBAN rules**:

1. One KANBAN card is assigned to each container.
2. The KANBAN card acts as production order when a part is removed.
3. The Customer process fetches the parts.
4. Parts are removed in the order of their production.
5. Only the quantity of parts that have been removed will be produced again.
6. Missing parts must be produced again as quickly as possible.
7. KANBAN cards are only made in the departments where they are needed.
8. The supplier process is responsible for the quality of the supplier's product and must eliminate deficiencies immediately.

Example: KANBAN card

Channel Planner V – KANBAN

The planning system channel planner V is equipped with flexible, self-clipping channel rows to hold KANBAN cards. A stable frame comprises the board.

The modular concept of the scheduling board always provides the possibility for later expansion. The accessories of the planning board channel planner V ensure quickly intelligible and clearly arranged information. Limiting Strips reduce and limit the row length to a width defined by the user. Therefore only the desired amount of KANBAN cards can be inserted. For the coloured definition of the KANBAN status areas »Start« and »Urgent« yellow and red markers are used.

 green Item No.: 83 71 703

Limiting Strips

Blue plastic, self clipping,
 90 mm width, 10 stripes = 1 pk
 Item No.: 83 71 700

Application Sample: Heijunka

Departments Communicate with KANBAN

The automotive supplier Georg Fischer AG has successfully introduced a production control based on the KANBAN principle. A vital element of this principle is the circulation of KANBAN cards controlled by planning boards.

Within the company, the foundry aims at the production of large quantities – on the one hand for an economic utilisation of their machines, and on the other hand because the production of large quantities ensures a better quality.

However, the aim of high throughputs is not always in line with the interests of further processing and delivery. According to the principle of Lean Management, the management board for example wants at the same time to reduce the raw material stocks at the intermediate warehouses. The inter-company aim of the management is to optimise the lot sizes of the foundry so that orders can be produced just-in-time and the finished products can be picked up by the customer within a defined time frame.

Self-controlling Loops as a Solution

The management of Georg Fischer GmbH & Co KG in Altenmarkt introduced the KANBAN method as a control medium in this power play between customer requirements, foundry and further processing. This comparatively simple system connects two successive processes with a self-controlling loop. The world-famous method reduces work-in-process stocks and finished products, thus reducing capital commitment. At the same time, the system reacts flexibly to the fluctuating customer demands.

With the help of the KANBAN control, the subsequent process gets the required materials from the buffer stock of the previous process at the right time and in the necessary quantity.

At Altenmarkt, the KANBAN system was introduced in stages. In a pilot project, the first loop – the foundry and the post processing – was tackled. At Georg Fischer GmbH & Co KG, the information for the production of the supplies needed is communicated via KANBAN cards – as usual in the classic KANBAN system.

At Altenmarkt, Austria, the Georg Fischer GmbH & Co KG produces aluminium and magnesium automotive components by means of the die-casting process.

Containers, Cards, Planning Boards

The planning boards serve as central organisational tool. On their way between the individual processes, the KANBAN cards are systematically inserted into the relevant columns.

The foundry's semi-finished products are stored in designated containers. As soon as a container is filled, it is provided with an accordingly labelled KANBAN card

The cards that return first are sorted into the green compartments, then into the yellow and finally into the red ones.

Better Communication and More Self-Responsibility

"One of the advantages of the KANBAN system is that it is obligatory for the departments and the employees to communicate with one another. The shift foremen have daily meetings in front of the

and transferred to the further processing department. Thus, the card is missing at the control board. As soon as the subsequent production island has processed all semi-finished products and the container is empty, the card returns to one of the compartments of the board. This means that if there are no more cards in the control board, all containers are circulating.

KANBAN boards fulfil several functions in the control loops. On one hand, they help with the sequence planning of the production orders activated by the cards, and on the other hand, they determine the priority level. For this reason, the compartments are painted in traffic-light colours.

boards. Furthermore, we have successfully strengthened the self-responsibility of the executive staff since this system was introduced. We can now generally rely on an uninterrupted information flow throughout the departments", explains Gerhard Hintsteiner, the technician responsible for the sector production planning at Georg Fischer GmbH & Co KG in Altenmarkt.

On their way between the processes, the KANBAN cards are inserted systematically into the planning boards by the staff members.

KANBAN – Control by using the »traffic light system«

The KANBAN Board is set up according to the company's specific requirements, but its function is always similar: The cards are inserted in the pockets of the board by row or column. The card pockets often have different colours. Cards are first inserted in the green pockets. The first KANBAN card that reaches the yellow zone signals that the predefined lot size has been reached so that production can be started. A card that reaches the red zone indicates that production must be started because, otherwise, the supply of the following processes would be at risk.

Labels

for transparent self-adhesive tab
 5 labels = 1 strip, 2 strips = 1 pk

Fig.: Cascading Display set up in columns by departments

Fig.: Cascading Display, order overview with status indication

The Cascading Display System

used as filing and display system with the stable metal compartments literally keeps everything in order. The compartments are mounted overlapping on the wall and are able to hold many, even bulky documents by using little space. The capacity is about 15 mm. By simply putting the compartments together it allows you to expand the system downwards, or by adding an additional basic unit to the side.

Basic Unit Cascading Display

consisting of:

- 1 set of wall mounting brackets
- 2 compartments, 1 cover plate

Workshop Scheduling Board

56

Workshop Scheduling Board

Customer satisfaction and improvement of economic results by using the workshop scheduling board.

Quick Overview:

- utilisation of work shop capacity
- allocation of work to the individual employees
- job orders in process
- job orders on hold
- completed job orders for inspection
- special instructions

Job Order Pocket

- holds all documents and the car keys
- assignment of work stations
- document collector during work
- initiate final check-up and invoicing

Set-Up and Function

The work shop scheduling board is simple and clear. The foreman allocates the job orders to the individual work stations by using job order pockets. Inside of them all documents are kept including the scheduling copy.

The right edge of the pocket lines up with the planned completion date. At the beginning of the work the mechanic takes the entire job order pocket, and only the scheduling copy remains in the board.

Planning for 5 or 10 employees can be done with the workshop scheduling board. In a further row orders are planned in advance for the following week by individual days.

Additionally, the workshop scheduling board has a pre-allocation compartment at the bottom for »alternative work«, »parts« or »orders to be scheduled« as well as for 3 subsequent weeks.

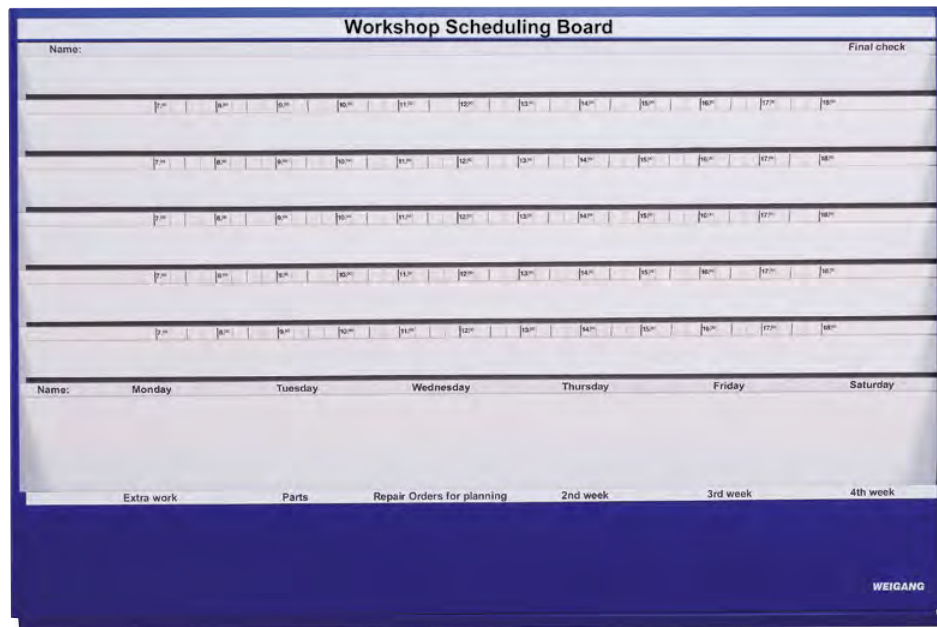

The allocated time for the

individual order can be marked with a yellow signal strip, which is inserted in the channel above the time scale. An additional status signal can be displayed with the icon cards, e.g.

- customer is waiting, consultation
- foreman/warehouse, rental car
- stop, break etc.

After completion of the job order, the scheduling copy together with the job order pocket is placed in the column final inspection on the board.

Workshop Scheduling Board, 6 rows for 5 work stations

incl. scales, label strips, icon cards, name cards and mounting kit

For document size A4 portrait
W = 1490 mm, H = 965 mm, D = 103 mm

Reception Board for Customer Service Representative including

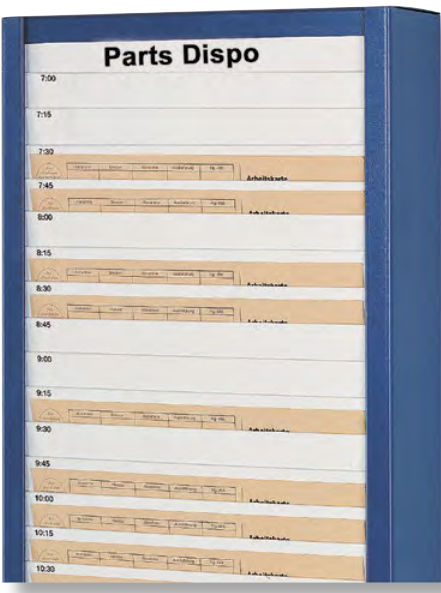

- Name Cards
- Acceptance Cards
- Time Management Cards

The Reception Board

- solid planning board system with flexible, self-clipping rows to hold name and time cards
- for 3 or 6 customer service representatives
- centrally placed at the reception area with mobile stand
- ensures a smooth reception procedure at customer service

3 customer service representatives
 W = 424 mm, H = 988 mm
 T = 40 mm, 39 rows
 Item No.: 83 42 205

6 customer service representatives
 W = 728 mm, H = 988 mm
 T = 40 mm, 39 rows
 Item No.: 83 42 206

Disposition Board
 for document size A4 portrait, visible edge 20 mm,
 W = 247 mm, H = 1200 mm, D = 80 mm
 45 rows, incl. 1 set of self-adhesive labels
 7:00 h, 7:14 h, until 18:45 h
 Item No.: 83 42 105

The Disposition Board

- provides a smooth flow of the disposition in the shop
- board panel with overlapping flexible plastic rows
- closed on the side to support the slots

InfoSpin – Information Pillar

6 panels for magnetic notices up to size A3 landscape, grey white surface in RAL 9002, frame made of matt anodized aluminium profiles, top and bottom plate aluminium grey RAL 9007, 6 castors, three are lockable.

Display Area:

Width = 430 mm, Height = 1900 mm

Overall Size:

Approx. 1040 mm in dia., H = 1980 mm

Item No.: 82 01 104

Will be delivered completely assembled

InfoSpin – Information Pillar

Large display area on little space.

The clou of the mobile pillar is the unusual star-shaped base layout

This results in six panels tilted inwards.

InfoSpin provides an area of almost 5 square meters for the display of notices.

A grey-white surface, top and base plate in aluminium grey – the design and colour is suitable for all surroundings.

6 castors are mounted on the base of the information pillar.

The soft tread allows InfoSpin to be easily moved around if necessary. When placed at the desired location, lockable castors provide a secure standing position.

MobilO

Mobile high desk for flexible and ergonomic working.

W = approx. 700 mm, D = approx. 700 mm, H = approx. 1100 mm,

4 columns and 2 base arms of oval tube, 4 castors, 2 lockable, side panels made of perforated plate, metal parts in aluminium grey RAL 9007, writing surface W x D = 700 x 450 mm, tiltable, vertically adjustable from 1050 to 1250 mm body with slide-out key board shelf and stationary drawer, height-adjustable shelf, body to be closed by lockable sliding roller shutter.

Body in **maple finish**

Item No.: 89 31 832

Body in **graphite finish**

Item No: 89 31 833

Perforated Plate

for extension of base plate

W = approx. 600 mm, D = approx. 130 mm,

H = approx. 330 mm, in alumin. grey RAL 9007

Item No.: 89 31 837

Pullout (no fig.)

for suspension files

Item No.: 89 51 138

Lean Management

In recent years, lean management and lean administration methods have been increasingly accepted in many fields of professional life. Leans means »adding value without waste« – with the objective of utilizing resources optimally, assuring customer satisfaction and improving the competitive situation of enterprises permanently. Two new tools for optimising administrative processes are for example the TeamBoard for delivery control or the OrgaBoard for order distribution at the development department.

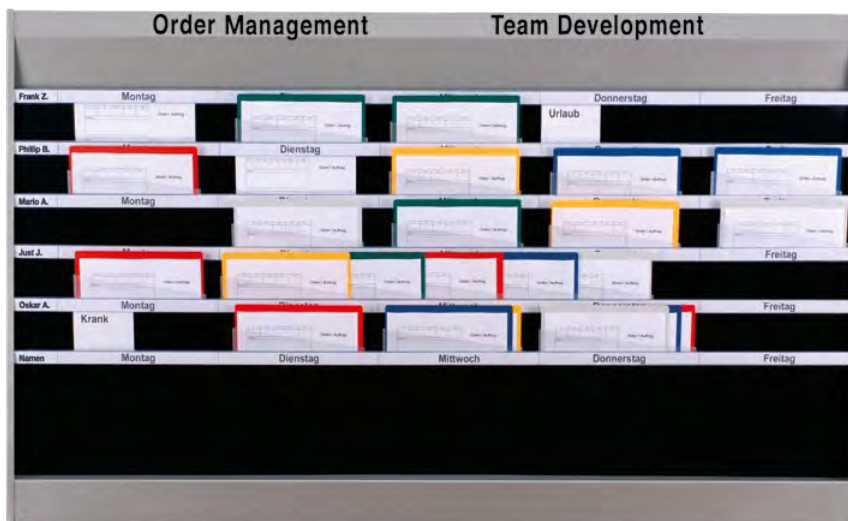

TeamBoard

consisting of a graphite colour base plate with a size of:
 W = approx. 1900 mm
 H = approx. 850 mm
 with 35 silver (RAL 9007) coloured compartments of the cascading display system
 The labelling of the title text strip as well as the column text strip can be freely selected.
 Item No.: 81 19 900

OrgaBoard

consisting of a silver (RAL 9007) coloured body with 5 high quality, black compartment rows, which will hold documents or OrgaPockets in paper size A4 portrait.
 Visible edge is approx. 45 mm, capacity is approx. 16 mm
 W = 1490 mm, H = 790 mm, D = 88 mm
 Item No.: 83 49 026

OrgaPockets

made of coloured plastic are able to hold documents up to a thickness of 5 mm in transparent bags on the front and rear side. Smart assignment of colours opens up further information levels catching the eye on the spot. The colour code can provide information about processing priorities, complaints, etc.

for paper size A4 portrait
 W = 222 mm, H = 312 mm
 5 pieces = 1 PK

Pocket Systems

The organisation pockets from WEIGANG

are intelligent memory aides! The pocket top is equipped with a scheduling bar with signal tabs indicating deadlines: Which job is of particular importance today? When does which order have to be settled? When does which customer have to be called again? Whether loose or filed, from business card to order document – the Datoclip+ pockets accommodate all papers of one job file.

Most important for an efficient project management is the greatest possible transparency in all stages of the project, and of key dates. An efficient project management enables you to detect capacity requirements timely and to take measures immediately. **WEIGANG's** suspension pockets equipped with scheduling bars are designed to meet the requirements of an efficient project management.

They do not only offer easy scheduling and a clear overview of the schedules of individual projects but of all projects in progress or on hold. The **WEIGANG** suspension pocket system is an important tool for a comprehensive and efficient organisation of the project management.

Application Example: Datoclip+ Two-in-one

Application Example: Datoclip+ individual

Application Example: Datoclip+ Twin Pocket
